

Shoring Bar Removal Tool

Silverback's Shoring Bar removal tool provides a safe and convenient way to remove shoring bars from an F track inside vans and containers.

This handy tool is designed to reduce the risk of injury in removing shoring bars, particularly in temperature-controlled and slippery conditions.

Its design includes a chrome finish with a knurled handle to minimise tool slippage. It has a 5mm hole at the end of the handle to enable the option of an identifying barrel seal to be added to the tool.
