Refrigeration Transport

Consumers are getting accustomed to almost any fruit, vegetable, meat, processed food & flowers being available all year round at their local supermarket. This is made possible by national and international sourcing, it has also increased the need for more 'refrigerated enabled' transport.

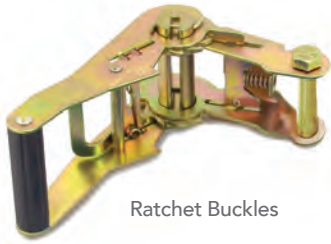

Two way demand means that chilled and frozen freight is being moved in and out of Australia 24/7.

When moving refrigerated goods you need a cargo equipment partner that has the product range to enable your temperature sensitive freight to reach its destination in optimum condition.

Silverback has been working with refrigeration transport customers for over 20 years. We have driver comfort and safety in mind as well as the protection and retention of your valuable temperature sensitive freight.

Silverback is your refrigeration transport solution partner.

What you need, when you need it, fast...
