# Vehicle Tie Down Single Wire J Hook

50mm x 3m LC 2500kg, Hi-Visibility PINK

**SILVERBACK**  
SUPERIOR PROTECTION & SAFETY

## INSTRUCTIONS:

The front J-Hook is placed in front of the tyre.

The floating J-Hook goes behind the tyre, with a protective Silverback wear sleeve.

When securing the wheels to the trailer, the strap with protective Silverback wear sleeve, goes over the wheel to enhance grip and reduce strap wear.

Trailer deck holes running vertically across the deck.

The ratchet can be placed straight when securing a single tyre, and placed off to the side of the deck when securing a vehicle to prevent damage to the ratchet as cars are rolled off the ramp.

## VERTICAL TRAILER SLOTS?

J-Hooks are the answer! Easily and safely secure your cargo.

J Hook Vehicle Tie-Down Systems are a complete system ready to use. Each system comes with a compact ratchet buckle with moulded handle. The tail strap is fitted with a J Hook for use in tight, restricted spaces. There is one J-Hook fitted to the main strap, and one floating J-Hook, plus one protective Silverback wear sleeve.

Like all our other quality ratchet straps and webbing products, they come with PU coating for increased UV protection and loops for hardware - including inner wear strips for extra strength and durability. This product is designed to work on slotted decking found on vehicle carrying transporters.

The J Hook Tie-Down System works on trailer slots running vertically along the trailer deck.

All our straps are designed, manufactured and tested for compliance with AS/NZS 4380:2001 and are backed by the Silverback assurance of quality. Compliance Tags are securely attached to the webbing.
