Heavy Duty Shoring Bar F-Track Adjustable 2 Handle

2215mm to 2625mm SWL 300kg

SECURE YOUR CARGO CONFIDENTLY

Heavy-duty, adjustable shoring bars are built to withstand 300kg and the demands of any transport environment.

Silverback shoring bars are designed and tested to perform an integral part of your load restraint equipment and to withstand the rigors of domestic and international transport environment.

All our heavy duty shoring bars are made from a 42mm x 3mm thick, round galvanised steel, with a safe working limit of 300kg. They have an extended length of 2625 mm and compressed length of 2215 mm, with 9 x 50mm increments of adjustments and 80mm spring travel distance to keep the shoring bar firmly fixed in the F-Track.

One of the most important things to consider is the weight of the load when you're using a load restraint bar. You'll need to have a rough idea of how much your cargo weighs and use a suitable type and number of bars. To safely secure a load, the combined working load limit (WLL) of the bar must be greater than the weight of the load itself. It's always recommended to use multiple bars depending on where the internal tracks are fitted.

Silverback also offers custom shoring bars. Minimum quantities and lead times apply.

FEATURES:

- Galvanised steel.
- SWL 300kg at 2215mm length & SWL 240kg at 2625mm length.

PRODUCT NUMBERS:

- P/N 10505 - Shoring Bar F-Track Extra Long Adjustable 2290mm to 3040mm, SWL 228kg to 300kg
- P/N 10514 - Adjustable Two Handle Spring Loaded Shoring Bar. 2215mm - 2625mm. 8-8.1kg each
