

# Heavy Duty Premium Chain Knuckle

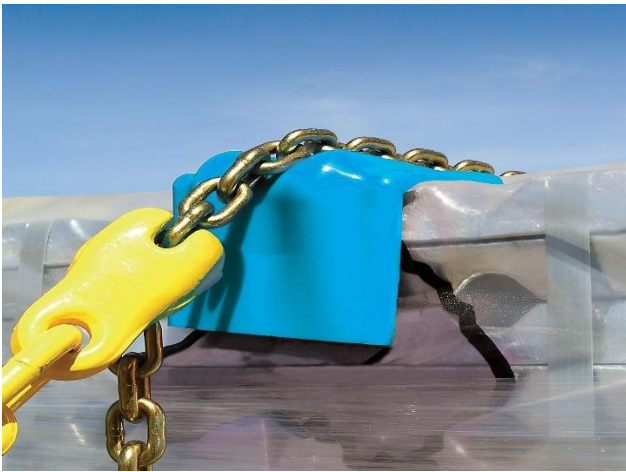

Silverback's range of products are designed to meet the ruggedness of the transport industry. Silverback's Heavy Duty Premium Chain Knuckle are strong and reliable and give peace of mind that your goods are protected from being damaged by chain restraints.

Silverback offers two types of the toughest chain knuckle in Australia. Both of Silverback's chain knuckle are hard wearing and offer a cost effective protection of your, or your customers' products. The small size allows the angle to be placed on top of unusual shaped or sloping loads, and remain in place where others don't.

Our Polyurethane Chain Knuckle are flexible and strong. They are 90mm x 90mm x 125mm and made from polyurethane made here in Australia.

Our Steel and Rubber Chain Knuckle are made from a steel inner angle covered with a durable rubber coating. They are 80mm x 100mm x 150mm x 10mm thick.

Silverback has a large range of equipment in store and are recognised leaders in this industry. For the full range of items and latest catalogues visit us at [www.silverback.com.au](http://www.silverback.com.au).
