- P/N 14176:
Hazchem Diamond Holders
273mm square
- P/N 25621-21: Australian
and New Zealand Emergency
Response Guide Book 2021

AUSTRALIAN DANGEROUS GOODS LABELS:

ADGC sets out the technical requirements for the transporting of Dangerous Goods. Silverback stocks a wide range of class signs, hazardous labels and placards specifically for the labelling and identification of dangerous goods. Silverback Class 3.0 Flammable Liquid labels comply with ADGC compliance and standards, helping your company follow the chain of responsibility.

Marking Flammable Risks with Confidence.

Class 3 flammable liquids produce vapour that can be ignited in air, on contact with a suitable ignition source. By definition these must have a flash point of less than or equal to 60.5°C. The flash point is the temperature at which a liquid can produce enough vapour to ignite.

Examples: unleaded petrol (ULP), xylene, kerosene, acetone.

Class 3.0 Flammable Liquid labels are designed to stick to Emergency Information Panels (EIP's), shipping containers, IBC's and hazardous gas substances stored or transported.

Please visit the Australian Dangerous Goods Code for more information in your States and Territories about Class 3.0 Flammable Liquid.
