

# Non Vented Splash Dust Free Goggles

## Unmatched Vision, Uncompromised Protection.

As part of Silverback's commitment to safety we offer a range of safety spectacles, goggles and eye shields. All the products in our eye safety range feature medium impact, polycarbonate lenses and comply with Australian & New Zealand Safety Standards AS/ NZS1337.1:2010. An added bonus is all our tinted and non-tinted safety glasses offer 99.9% UV eye protection from the harsh Australian sun.

Protective eyewear is required by legislation in many workplace situations, and our range meets these various requirements with style, comfort and certified effectiveness.

Silverback's Non-Vented Splash Goggles feature a clear lens and are manufactured with a modern, ergonomical design. They allow full vision with a non-vented gas tight/ flame retardant safety goggle feature, and a medium impact, standard, anti-scratch lens which provides 99.9% UV protection. The benefits of non-vented goggles are total eye protection from liquids, gases and dust, and is why we use them in our Emergency Response Kits.

Silverback's Non-Vented Splash Goggles come from 3M so you know the quality in the brand. They are designed to suit prescription glasses, dust masks or respiratory half masks. These goggles are excellent for general purpose use such as chemical cleaning, general workshops, high dust environments, use in medical, waste handling and many other industries. They have a lightweight design and adjustable head strap for extra comfort. For ease of purchase they come individually wrapped in boxes of 24.

AS/NZS 1337.1:2010  
LIC 25492

### BENEFITS OVERVIEW:

- Aerodynamic shape with cylindrical lens for 180° of distortion-free vision.
- The model is specially designed to fit with prescription glasses, dust masks, or respiratory half-mask.
- Indirect ventilation system to prevent fog, liquids and dust (the non-vented version also provides protection against gas and fumes).
- The lens absorbs more than 99% UV. • AS/NZS1337.1 Medium Impact Rating.
